The best exercises for your bones

Certain types of exercise can increase muscle mass, which in turn enhances strength, muscle control, balance, and coordination. Good balance and coordination can mean the difference between falling—and suffering a fracture—and staying on your feet. Strong evidence shows that regular physical activity can reduce falls by nearly a third in older adults at high risk of falling.

You know exercise is good for your heart. You know exercise is good for your muscles. And exercise is good for your bones. Not only that, for strong bones, exercise is essential. In this report, Harvard doctors share seven complete workouts that will foster stronger bones, build defenses against osteoporosis, and give you greater freedom from the risk of a break or fracture.
