## Start Your Day With Whole Grains

Fiber can help lower cholesterol, prevent constipation, and improve digestion. And many Americans don't eat enough of it. On average, we get less than half of what we need. Most whole grains are great sources of fiber. Start with breakfast: Look for whole-grain cereal or oatmeal with 3 or more grams of fiber per serving. Add fruit, and you'll be on your way to the daily goal of 38 grams for men under 50 and 25 grams for women under 50.

## Alzheimer's: Vitamin B supplementation could slow aging of neurons

Researchers looked at the effect of supplementing a group of adults with a form of vitamin B3 and how it may improve energy metabolism in the brain.

## Wild dreams warn of Parkinson's disease

Acting out vivid dreams — for example by flailing, kicking or jumping out of bed — [can be a harbinger of neurodegenerative diseases](#). REM sleep behaviour disorder (RBD), which occurs during the rapid eye movement (REM) sleep phase, seems to be linked to conditions in which the protein  $\alpha$ -synuclein forms toxic clumps in the brain. Actor and science-communication advocate Alan Alda, who starred in the television series *M\*A\*S\*H*, was diagnosed with Parkinson's disease after reading about the link and noticing the symptom in himself. RBD is a useful early sign, and raises a tantalizing possibility for therapy: people with motor problems when awake can still move or shout when they are sleeping. ## Basal Insulin: Types, Benefits, Dosage, and Side Effects

## How to Lower Heart Risks in Diabetes

A mix of lifestyle changes and medication can help you better manage blood sugar and heart health:

- Lose weight. When you shed even a few extra pounds, you can lower blood pressure and blood sugar levels.
- Commit to a heart-healthy diet that also fights inflammation. Get plenty of vegetables and other sources of fiber every day. Cut sugars, saturated fat, trans fat, and salt.
- Get active. Build up to at least 30 minutes of aerobic exercise on 5 days of the week. Fun activities count, too, like gardening and going for a walk. And don't forget to work your muscles -- do strengthening exercises at least 2 days per week. Before you try a new activity, though, ask your doctor if it's safe for you.
- Stop smoking, and cut back on alcohol. Women who drink should have less than one serving a day, and men should have less than two per day, unless your doctor advises even less.
- Control high blood pressure and high cholesterol. You can do this with a combination of healthy habits and medication.

## Top Causes of Fainting and When to Worry

Dehydration, low blood pressure, arrhythmia, and these other issues can make you feel woozy and even faint.

### Antibiotics use in animals is underestimated

The amount of antibiotics used in animal farming is underestimated in official reports. Researchers collated figures from sources such as farm surveys and drug sales, because “the majority of data on antibiotic use in the world is unusable”, according to epidemiologist Thomas Van Boeckel. Calculations of antibiotic usage in 229 countries suggest that Africa’s use is probably twice what the World Organization for Animal Health reports, and use in Asia is 50% higher than reported. [Globally, antibiotics use in farmed animals is projected to grow 8% between 2020 and 2030.](#) There are efforts to curtail agricultural antibiotics use, which could drive drug-resistant infections in humans.
